**Reynolds Construction Selects Computer Guidance's Construction Cloud ERP**

*One All-encompassing ERP Solution For All Construction Financial and Project Management Needs in the Cloud*

**Scottsdale, Arizona – May 16, 2017** – Computer Guidance Corporation, the leading developer of cloud-based construction management software, today announced that Reynolds Construction, LLC has selected Computer Guidance's eCMS construction cloud ERP software for their water infrastructure construction business.

Technology innovation, speed of delivery, and proven performance were all key factors in the decision of Reynolds Construction to select Computer Guidance to implement their new ERP system. The Reynolds business, which officially went into operation on May 1, 2017, was formerly a part of a large publicly traded company that administered ERP services at a corporate level. The timing of the transaction involved with the transfer of ownership required that a new ERP system be implemented in an approximate two-month time period, while yet providing a system that would be state-of-the-art and sustainable for the long term.

"We looked at several ERP solutions in the market in support of our water infrastructure business needs and chose Computer Guidance's Cloud eCMS ERP in the end," said Les Archer, President, Reynolds Construction, LLC. "We wanted a single solution and single instance approach that could be delivered within a very aggressive timeframe as well as the support and training required for us to be operational come Day 1. We found the eCMS browser-based and cloud platform with its comprehensive construction-specific applications to be more complete, reliable and flexible over its competition. This combined with Computer Guidance's focus on customer service made the decision very clear for us."

Computer Guidance's eCMS v.4.1 will deliver to Reynolds a single solution approach for office and remote field employees to collaborate and share real-time accurate information on demand. With its advanced business intelligence and analytics capability, Reynolds will be able to stay competitive while planning for their future growth. The organization anticipates future growth initiatives to expand its business in the ever growing water infrastructure construction marketplace.

"An important criteria for us was to also have a system that was capable of adapting to our future needs," added Archer, "We became very comfortable knowing that the eCMS system has the ability to be easily customized and scaled as necessary to accommodate our future company expansion. To be ready for these opportunities, we needed a rock solid cloud ERP platform with robust construction financial and project management functionality."

"eCMS v.4.1 truly sets new standards for construction-specific ERP software in the cloud," said Mike Bihlmeier, President, Computer Guidance Corporation. "We look forward to partnering with Reynolds as they realize the benefits of our cutting-edge financial and project management, business intelligence & analytics, content management and mobile functionality we deliver with our flagship eCMS v.4.1 software."

**About Reynolds Construction, LLC**

**Reynolds Construction, LLC, (formerly known as Layne Heavy Civil, Inc.)** a privately held company, is one of the industry's leaders in the construction of water and wastewater infrastructure. Reynolds operates in 7 integrated offices nationwide, with a current staffing of approximately 400 employees. Specializing in water supply and piping systems; sewer mains and wastewater conveyances; and treatment facilities, Reynolds offers these services under both traditional and alternative project delivery. With a legacy of nearly 75 years, Reynolds still holds true to the basic fundamental values by which it was founded, to deliver projects safely, on time, and within budget, providing efficient, well-functioning systems.
